## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of claims 1-62 in the reply filed on 11/17/08 is acknowledged. The traversal is on the ground(s) that the examination of Groups I and II can be performed without serious burden. This is not found persuasive because the inventions in Groups I and II are directed to substantially different subject matter that would require search in different respective classes and sub-classes.

The requirement is still deemed proper and is therefore made FINAL.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Art Unit: 2617

3. Claims 1, 31, 40, 51, 55 and 62 rejected under 35 U.S.C. 102(e) as being anticipated by Yoon (US 2008/0259855).

Regarding claims 1, 31, 40, 51, 55 and 62, Yoon discloses a circuit for use in a first wireless access point operating in accordance with a communications protocol comprising: a first acquisition circuit for identifying receipt of a first data packet from a second wireless access point; a speculative response circuit for issuing a speculative response to said first data packet to said second wireless access point; wherein said speculative response is transmitted by said first access point before said first wireless access point has completed a packet decoding operation on said first data packet. See Abstract and paragraph 17.

#### ***Allowable Subject Matter***

4. Claims 2-9, 32-39 and 52-54 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
